

Audio Visual Requirements

The described AV setup is critical in enabling Shane to create the best experience for the audience. Note presentation includes slides and video with intermittent sound.

Room & Event Requirements

SOUND: Shane requires the ability to move around the stage and, if it all possible, the use of both hands. Ideally, a wireless lapel, lavalier or headset mic is required.

CONNECTIONS & COMPUTER: Shane will have a computer and the presentation on a USB. If Shane's computer is used the following is required: HDMI connection, 240v power point, standard headphone jack.

PROJECTOR/SCREEN: required for videos (resolution 1080/1920) & slides (widescreen (16:9)). Please advise well in advance if letterbox (4:3) format is preferred.

STAGE & LIGHTING: Lighting is required to enable audience to clearly view Shane but not wash out the visuals on projector/screen). Ideally, stage or podium should be raised to be 20-50cm above floor level if speaking in a flat room to allow audience clear view.

Backup AV & Other

As a backup Shane will bring: Backup computer (Microsoft Surface 4), HDMI to HDMI Micro Connector, Backup Remote Clicker, Backup Memory Stick

The presentation is not to be recorded without Shane's prior written consent. Please send any content (photos, videos, testimonials) to shane@glidetosoar.com.

Please let us know in advance if any requirements are not possible.
